

The **NEW** Octagon 20 Parrot Brooder

Parrot Rearing Module

Suitable for all parrots, falcons and other altricial species.

This ingenious brooder is a high quality unit capable of providing the ideal conditions a young altricial bird needs. It provides comforting all round warmth from gently circulating air, with no high temperature radiant heat emitter or worse, heating from underneath which can be so hazardous with altricial species.

'Lift off' construction allows very convenient access for hand feeding young birds and for cleaning the equipment.

Because the heart of the brooder is an Octagon 20 incubator top (a), the heating, temperature control and ventilation are all of the high standard required of an incubator. If required, electronic humidity control (H22) and temperature alarm module (T20) can be added.

The center section (b) is constructed from a double skin of clear polymer allowing an unobstructed view of the birds. The lack of visual obstruction means that the growing parrot becomes used to its environment and particularly people around it. This is crucial if the bird is to be tame and friendly in later life. Smooth internal surfaces ensure easy cleaning and safety for the young birds. The detachable base (c) is moulded from structural polyurethane with a core of insulating foam which provides good thermal insulation as well as being tough and washable.

The chick tray (d) locates in the base to provide an easily gripped surface for the birds to stand on as they grow. The tray has a perforated bottom to allow waste to fall through.

The Octagon 20 Parrot Brooder is supplied as a complete, self contained unit, or if you already own an Octagon 20 incubator, the Parrot Rearing Module can be purchased alone to convert an Octagon 20 incubator into a brooder.
